 "OLIVER" WOOD AND STEEL SPINDLE HAND SCREWS

"OLIVER" Peerless Adjustable Screw Clamps

Jorgensen Patent

The "Oliver" Peerless Adjustable Screw Clamps, Jorgensen Patent, are widely known, for their economy and efficiency have established them as standard in the leading industrial concerns as well as Government shops and educational institutions. Their superiority is evident at first sight, and the service which they have given their many users for several years substantiates the statement that "they are as good as they look."

1. They are about twice as rapid acting as any other clamp.
2. Their construction is simple.
3. They grip angular or straight work with equal facility.
4. One jaw can be made to overlap the other, forming an often desirable position.

5. They give a tighter grip with less effort.
6. Glue will not adhere to the spindles, causing the threads to strip.
7. Their parts are not liable to become separated.
8. Their design combines neatness and durability.
9. Guaranteed against breakage.

The jaws are made from a fine quality of selected straight grain hard kiln-dried maple. The spindles are of cold drawn steel with accurately cut double threads of special quick-acting type working in cold drawn steel nuts. The handles are made from hard wood protected by a strong ferrule, and secured by pins to the screws. The sockets for the spindles are also made of steel.

"OLIVER" Steel Spindle Hand Screws

Non-Adjustable

"Oliver" Non-Adjustable Steel Spindle Hand Screws are built of the same high grade materials and in the same workmanlike manner as our Peerless Screw Clamps. They have the steel nut and spindle with right and left thread retaining the speed and durability found in the Peerless Adjustable Screw Clamps. The slotted hole in the jaw through

which the spindle passes is eliminated, however, and in its place is a straight hole, thus keeping the jaws parallel at all times, giving the same solid effect while in use that is found in the wooden spindle hand screw, with the added feature that the steel spindles will not break.

"OLIVER" Wood Spindle Hand Screws

These are as strong as the sturdy hickory from which they are made. Spindles are made

of well-seasoned second-growth hickory. Jaws are made from Michigan hard maple.
